

Ethical Hacking = Effective Hacking

What to look for in a high quality penetration test...

Harmless Hacking, Priceless Perspective

In pentesting, expertise isn't optional — it's essential. You need seasoned professionals who not only do no harm, but actively do good. They understand how vulnerabilities interconnect and how misconfigurations can compound risk. By chaining these insights together, they paint a comprehensive portrait of your security posture.

Real Environments, Real Observations

Generic findings from generic tests won't cut it — you need to know how vulnerabilities directly impact your unique environment. No hypotheticals, no irrelevant issues, just a clear picture of your true security posture.

Insights, Not Essays

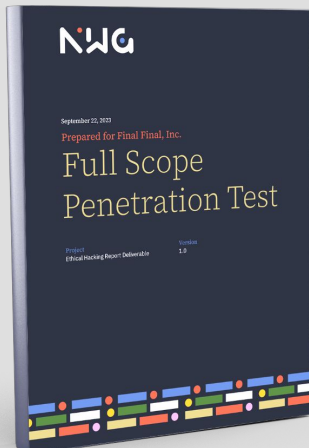

In pentesting, substance trumps fluff every time. You need incisive analysis and clear priorities, not a bloated report that buries the critical insights. Zero in on your most pressing security risks so you'll know exactly where to direct your efforts for maximum impact.

Good Pentests...

- ✓ Establish a clear security baseline
- ✓ Spotlight your most critical risks, including those introduced by your AI products or tools
- ✓ Guide smart security investments
- ✓ Enable risk-informed decisions
- ✓ Engage executives with accessible insights

Bad Pentests...

- ✗ Wreak havoc on your operations
- ✗ Waste time with inaccurate or misleading findings
- ✗ Provide no clear path forward
- ✗ Distract from your own security agenda
- ✗ Foster an 'us vs them' dynamic between teams

Learn how NWG can help your organization navigate threats with clarity and precision...

NWG's ethical hacking reports are designed to engage all stakeholders, from techies to execs to auditors. It's a concise, crystal-clear roadmap of your risk landscape, complete with practical, actionable recommendations you can put into play from day one. Get in touch to see an example.

NWG Full Scope Penetration Testing

Unleash the Power of the Dark Side (for Your Own Good)

Our elite team of ethical hackers lives and breathes the latest threats. From well-known exploits to dark web forums to operationalizing AI agents, we leverage the same tactics the bad guys use to put your defenses to the ultimate test.

Insider Threats: Your Worst Nightmare, Our Specialty

Our simulated attacks include an “assumed compromise” scenario, revealing just how much damage an “insider” could do — including misconfigured AI that handles sensitive data.

360° Attack Surface Coverage

People, processes, AI and everything in between? Check, check and check. We leave no corner of your digital kingdom unexplored, giving you the most comprehensive, data-driven view of your risk landscape.
