Full-Scope Pentesting Creates the Roadmap to Improve Your Cyber Resiliency

Perspective is Priceless

In pentesting, expertise is not optional — it's essential. You need experienced professionals who not only do no harm, but actively do good. True experts know how vulnerabilities interconnect and how misconfigurations can compound risk. By chaining these insights together, they paint a comprehensive portrait of your security posture.

Real Observations from Real Environments

Generic findings and basic checklists are not empowering. You need to understand how vulnerabilities directly impact your unique environment. No hypotheticals, no irrelevant issues – just an accurate, concise view of your risk landscape.
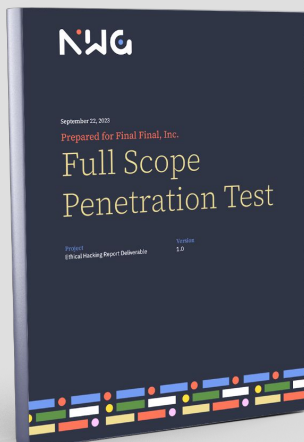

Insights, Not Essays

Substance trumps fluff every time. You need incisive analysis and clear priorities, not a bloated report that buries the critical insights. Zero in on your most pressing security risks so you'll know exactly where to direct your efforts for maximum impact.

Good Pentests

✓ Establish a clear security baseline
✓ Spotlight your most critical risks
✓ Guide smart security investments
✓ Enable risk-informed decisions
✓ Engage executives with accessible insights
✓ Allow for immediate action

Bad Pentests

✗ Wreak havoc on your operations
✗ Waste time with inaccurate or misleading findings
✗ Provide no clear path forward
✗ Distract from your own security agenda
✗ Foster an "us vs. them" dynamic between teams
✗ Take months for results to arrive

Full Scope Penetration Test

Project
Ethical Hacking Report Deliverable

Version
1.0

NWG helps organizations navigate threats with clarity, precision and speed

Our ethical hacking reports are designed to engage all stakeholders, from techies to execs to auditors. We deliver a concise, crystal-clear roadmap of your risk landscape, complete with practical, actionable recommendations you can put into play from day one. Get in touch to see an example.

How Effective is Your Security Against Today's Threats?

Full Scope Penetration Testing:
The Missing Link in Your Security Strategy

By actively attempting to breach your systems, a full-scope penetration test measures the effectiveness of your security controls, and delivers a clear roadmap for mitigating risks.

→ Uncover Hidden Vulnerabilities

→ Validate Security Effectiveness

→ Assess Potential Business Impact

→ Prepare for Evolving Threats

→ Plan for Security Improvements

Leave No Stone Unturned

Most pentests barely scratch the surface. But with NWG Full Scope Penetration Testing, you get the full story of what an attacker would be able to do in your unique environment – including exploiting things you intended to be there.

We connect the dots on everything from unauthenticated public-facing attacks to internal assumed compromise risk; from your cloud presence to social engineering employees and beyond. If it's fair game for an attacker, it's fair game for us – the difference is that we won't disrupt your business, and at the end of the engagement, you'll get an actionable report from us instead of a ransom demand from them.

Partner with the experts who want *you* to be the hero. Together, we will validate your defenses and reduce your cyber risk.
